- V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- 1. Statement

Novelty (N)

Yes: Claims
4-15,17,18

No: Claims 1-3,16,19

Inventive step (IS) Yes: Claims 1-19

No: Claims

Industrial applicability (IA) Yes: Claims 1-19

No: Claims

2. Citations and explanations

see separate sheet

Re Item I

The applicant has introduced the term "a bondable and/or solderable layer of" into claim 1. Basis for this amendment can be found on pages 8 and 10-11 of the application as originally filed.

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

- 1. Reference is made to the following documents:
 - D1: GB 967 681 A (MOND NICKEL CO LTD) 26 August 1964 (1964-08-26)
 - D2: US-A-6 034 422 (HATSUTA CHIAKI ET AL) 7 March 2000 (2000-03-07)
 - D3: WO 02 29132 A (SPARING CHRISTIAN ;HUTCHINSON CARL (DE); MAHLKOW HARTMUT (DE); ATO) 11 April 2002 (2002-04-11) cited in the application
 - D4: EP-A-0 797 380 (MACDERMID INC) 24 September 1997 (1997-09-24) cited in the application
 - D5: DATABASE WPI Section Ch, Week 198603 Derwent Publications Ltd., London, GB; Class A85, AN 1986-017757 XP002225878 & JP 60 241291 A (TOSHIBA KK), 30 November 1985 (1985-11-30)

2. Novelty

. The new term, however, does not introduce a distinguishing feature in view of D1 (compared to the subject-matter originally claimed). Consequently, the subject-matter of claims 1-3, 16 and 19 is anticipated by D1:

Document D1 discloses (page 3, lines 1-15, 77-82) a method of plating on a substrate by a displacement plating reaction provided with a copper surface comprising (a) depositing a first metal, such as platinum or palladium from an acidic solution on the substrate in a first step and (b) plating silver on said substrate in a second method step.

Documents D2, D3 and D4 relate to a one step method of plating silver on a substrate. Document D5 discloses complexing agents suitable for chemical copper plating baths. Hence, none of these documents anticipate the subject-matter claimed.

3. Inventive step

The document D4 is regarded as being the closest prior art to the subject-matter of claim 1 (as regards the embodiment with silver used in both method steps). D4 mentions a two step method wherein in a first step a first metal is deposited which is more noble than copper and in the second step another metal is chosen which is more nobel than the first metal (page 4, lines 1-11). However, silver is only used and specified as a metal suitable for the first step, e.g. gold is recommended as a metal for the second method step.

The subject-matter claimed differs from D4 at least in that according to the application the metal used in the second step does not have to be more noble than the first metal but can be even the same as in the case of silver (provided different rate).

The applicant has shown (see example 3 and comparative example) that the solderability of the layer is improved when the deposition rate in the two steps is different.

Consequently, the objective technical problem can be regarded as to provide a method which results in an improved solderability.

Neither D4 alone nor in combination with another document cited give an incentive to apply different deposition rates for silver in order to solve this problem. Thus, the embodiment relating to the plating of silver in two steps, whereby silver is used in both steps is not obvious in view of the documents cited.

4. The subject-matter claimed is industrially applicable.

Claims

- 1. A method of plating silver on a substrate by a displacement plating reaction provided with a copper surface comprising
 - a) depositing a first metal which is more noble than copper on the substrate in a first method step and
 - b) plating silver on said substrate in a second method step, with the proviso that the first metal is deposited at a rate that is at most half the rate of plating of silver in the second method step when the first metal is silver.
- 2. The method according to claim 1, wherein the first metal is palladium or gold.
- 3. The method according to claim 2, wherein palladium is plated from an acidic solution.
- 4. The method according to one of the claims 2 and 3, wherein palladium is plated from a solution containing sulfuric acid.
 - 5. The method according to claim 1, wherein the first metal is silver and the rate of silver deposition from a silver deposition bath in the first method step is regulated by adjusting at least one deposition parameter and/or by adjusting the composition of the silver bath.
 - 6. The method according to claim 5, wherein the rate of silver deposition in the first method step is regulated by adjusting the processing temperature.
- 7. The method according to one of the claims 5 and 6, wherein the rate of deposition of the silver in the first method step is regulated by using a Cu(I) complexing agent in the silver bath.
